Locate the kit containing the stated parts.

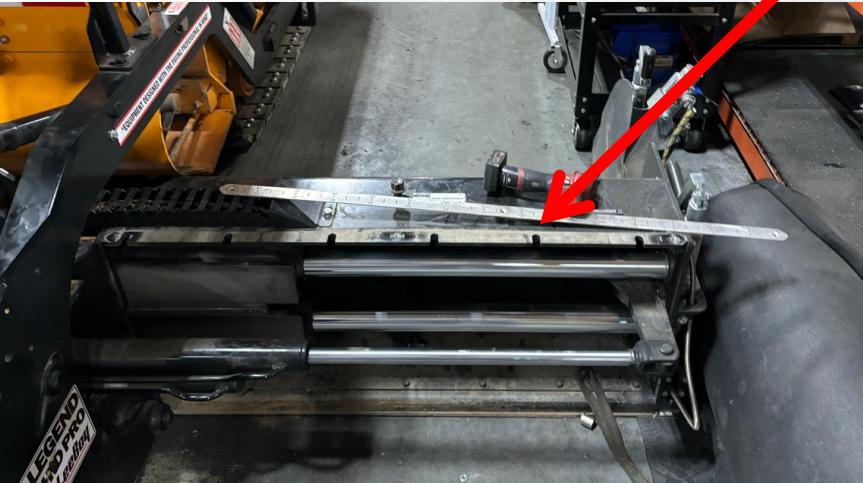

Raise the screed and push both extensions all the way out.

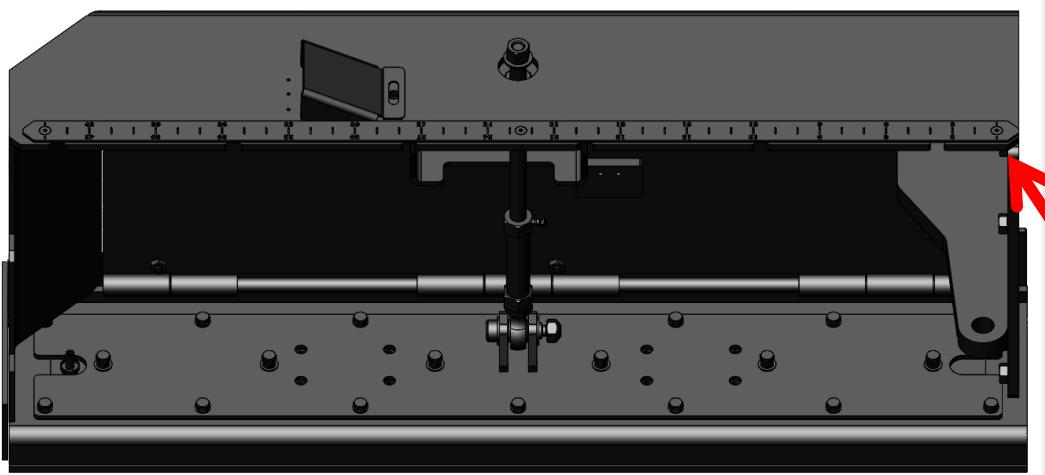

Unfasten the existing hardware in the extension ruler sheets, on both sides of the machine.

Remove the existing extension ruler sheet.

Locate the new extension ruler sheets and the supplied hardware.

Place one of the extension rulers on top of each screed extension, so that the countersunk holes are on top.

- The “3” needs to be on the outer most side of the screed extension.

When the holes have been properly aligned, use the supplied hardware to securely fasten the rulers to the top side of each extension.

When the hardware has been securely fastened, ensure that the heads of the countersunk bolts are not sitting above the top of the extension ruler.
